

Problem

Given an integer array of size N and an integer X, find all unique triplets (a, b, c) such that: $a + b + c = X$ The indices of the elements are different. Print the triplets in ascending order. If no triplet exists, print No Triplet Found.

Input Format

The first line contains an integer N. The second line contains N space-separated integers. The third line contains the target sum X.

Constraints

$3 \leq N \leq 10^5$ $-10^9 \leq arr[i] \leq 10^9$ $-10^9 \leq X \leq 10^9$

Output Format

Print each unique triplet in ascending order, one triplet per line. If no such triplet exists, print:

No Triplet Found

Sample Input 0

6
1 4 45 6 10 8
22

Sample Output 0

4 8 10

Sample Input 1

6
1 2 3 4 5 6
10

Sample Output 1

1 3 6
1 4 5
2 3 5
