

Problem

A subarray is ascending if every element is strictly greater than the previous element.

Return the maximum possible sum among all ascending subarrays. Complete the function `maxAscendingSum` that takes the following parameter: `int arr[n]`: an array of positive integers. Returns `int`: the maximum ascending subarray sum.

Input Format

The first line contains an integer `n`, the number of elements in the array. The second line contains `n` space-separated integers.

Constraints

$1 \leq n \leq 10^5$ $1 \leq arr[i] \leq 10^4$

Output Format

Print a single integer representing the maximum ascending subarray sum.

Sample Input 0

5
10 20 30 40 50

Sample Output 0

150

```
5 max_sum = arr[0]
6 for i in range(1, n):
7     if arr[i] > arr[i - 1]:
8         current_sum += arr[i]
9     else:
10        current_sum = arr[i]
11        if current_sum > max_sum:
12            max_sum = current_sum
13 print(max_sum)
```

Line: 12 Col: 30
